PHIREON GLOBAL PARTNERS

Phireon Global Partners is developing a proprietary blockchain based community management tool powered by custom private currencies. It is a membership platform useful for funds, condo associations, membership companies like resorts, the Mayo Clinic, and even municipalities or nations for digital central banking and citizen management. Phireon will be the public cooperative corporation and a public demonstration of the power of our system. Our clients will get a whitelabeled membership management tool of their own with their own rewards club , custom currency, and transaction processing built in, increasing their transaction revenue and customer engagement.

Benefits include:

- Sophisticated blockchain based Community Management
- HIPAA compliant secure data storage and record keeping
- Custom Private Currency
- Transactions (purchases, rent, mortgage, membership fees) processed natively adding more revenue to their bottom line
- Higher customer/member engagement
- Direct communication with clients and members
- Increased versatility, security, and transaction processing cross platforms and economic ecosystems.

PHIRE

PHIRE is the premier Crypto Asset Generating token issued and distributed by Phireon Global Partners (PGP). PGP is the go to company of choice for architecting highly secure, easy to use, cutting edge Community Management apps with custom digital currencies, HIPAA compliant secure social data, and governance on the blockchain for multinational corporations, condo associations, developers, neighborhoods, HOAs, municipalities, and government clients. The Phireon platform is the flagship product of PGP and will be demonstrated and deployed to market as a member-owned, decentralized, self-governing global cooperative with its own private economy. This serves as PGP's first official client bringing immediate value to PHIRE token holders. Future clients, PGP built neighborhoods, and developments will be able to see the value of the system and license the underlying Phireon platform as a whole or a la carte for their distributed economic and community management needs.

In addition to paper equity in Phireon Global Partners, investors get PHIRE tokens. PGP keeps a percent of every new client's custom tokens and distributes them to PHIRE token holders. This means that whenever new client tokens are created, Phireon Global Partners will airdrop a percentage of those new client tokens directly to PHIRE token holder's wallets. This will begin with Earthcredits, Phireon's private membership stable priced asset backed transactional token. The combined revenue of clients' transactional GDPs and token valuations could translate to billions of dollars in revenue for PGP in the first two years. Imagine if Ethereum kept a percent of every token created using their protocol. **This is the power of Phireon.**
